

Bases des origamis

Les **origamis** ont souvent des bases de pliages communes. Un certain nombre de diagrammes commence directement d'une base. Il faut donc les connaître.

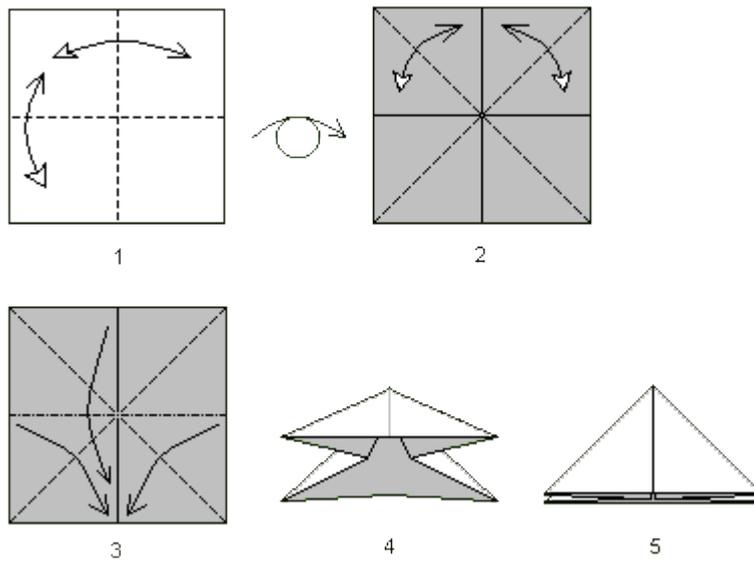

La base préliminaire

Comme son nom l'indique, la base préliminaire sert de base à d'autres bases d'origamis. Elle combine deux plis montagnes effectués le long des diagonales du carré à deux plis vallée effectués le long des médianes du carré.

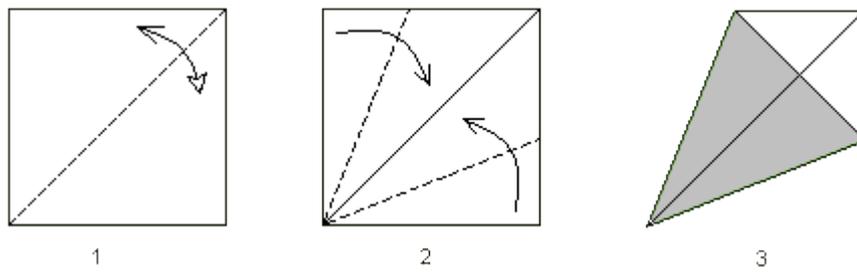

La base de la bombe à eau

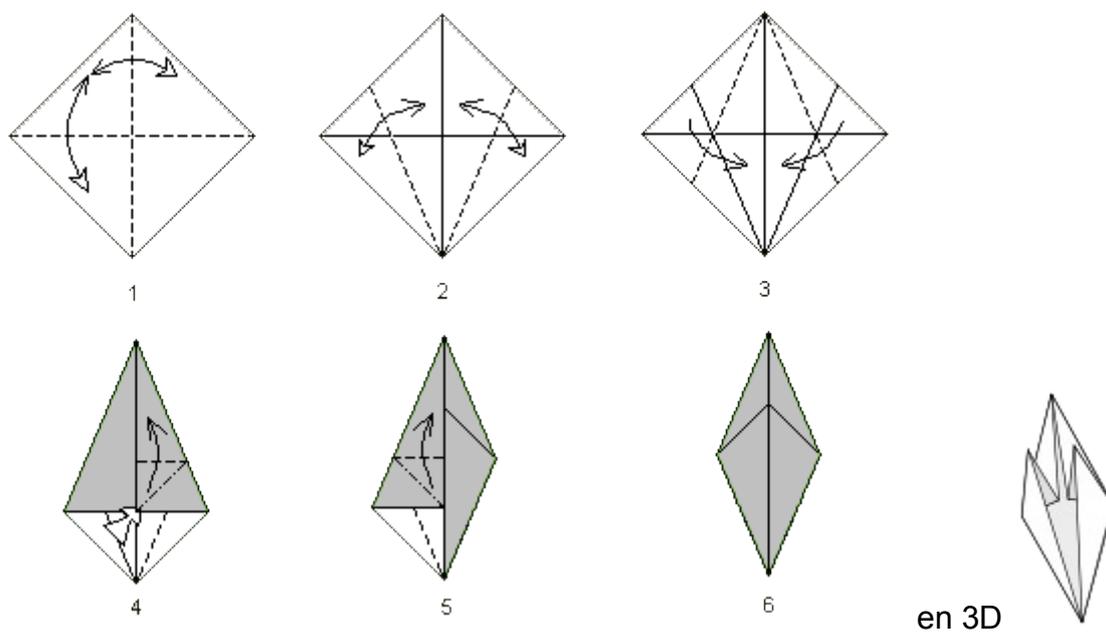

C'est l'inverse de la base préliminaire :

La base du cerf-volant

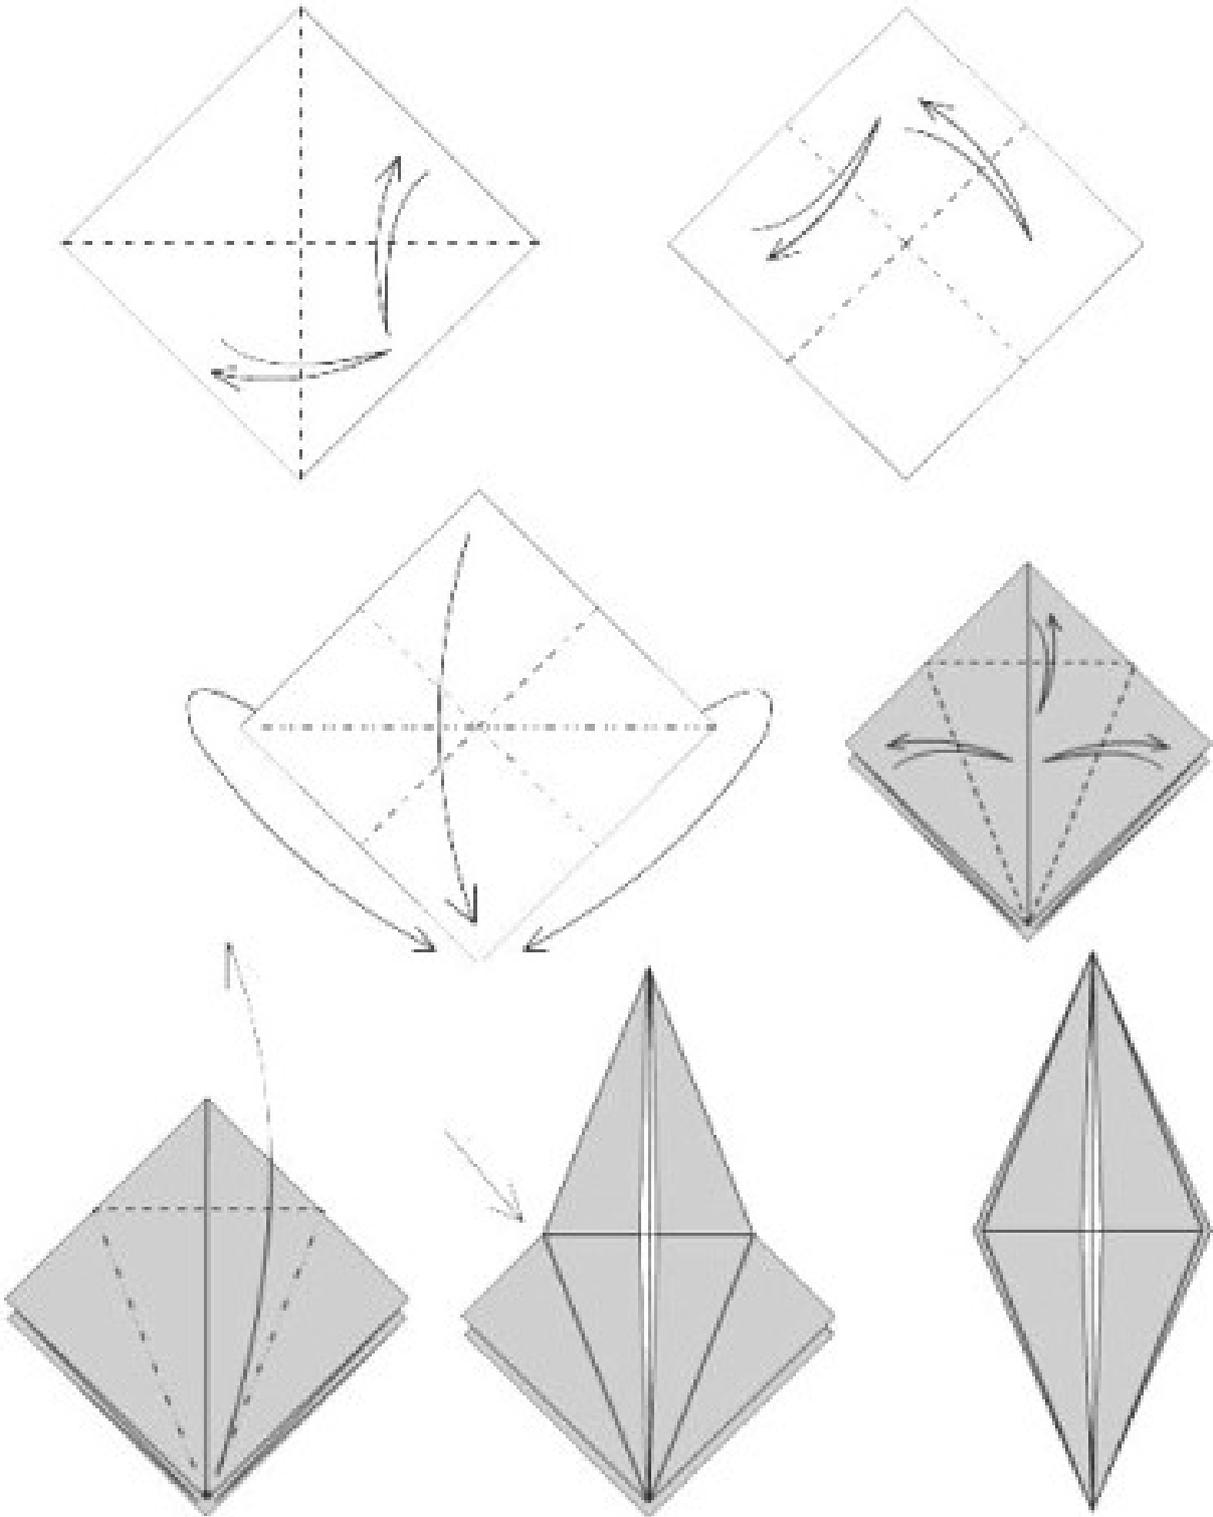

La base du poisson

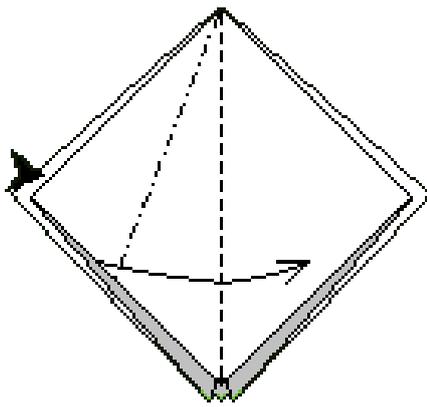

en 3D

La base de l'oiseau

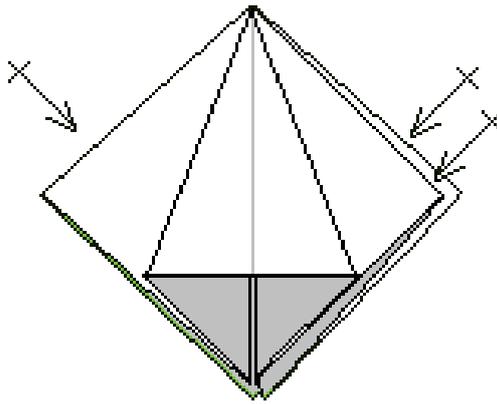

La base de la grenouille

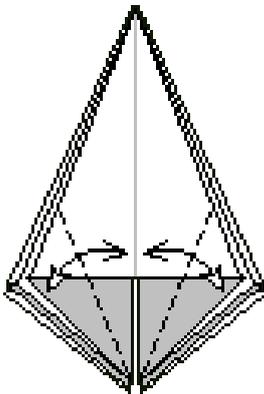

La base de la grenouille commence à partir de la base préliminaire :

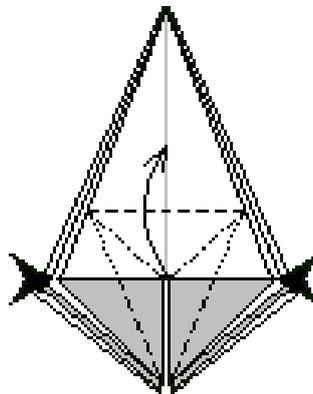

1

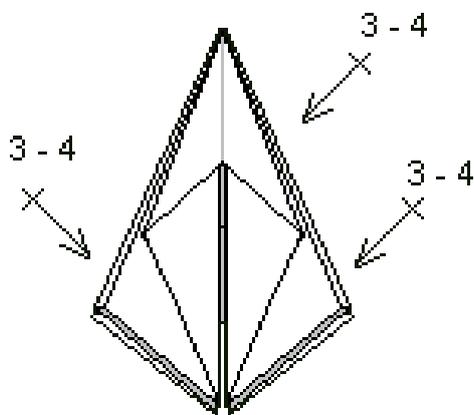

2

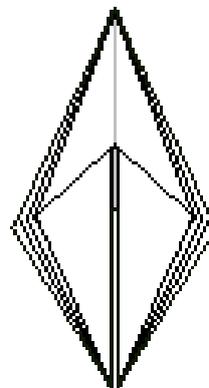

3

4

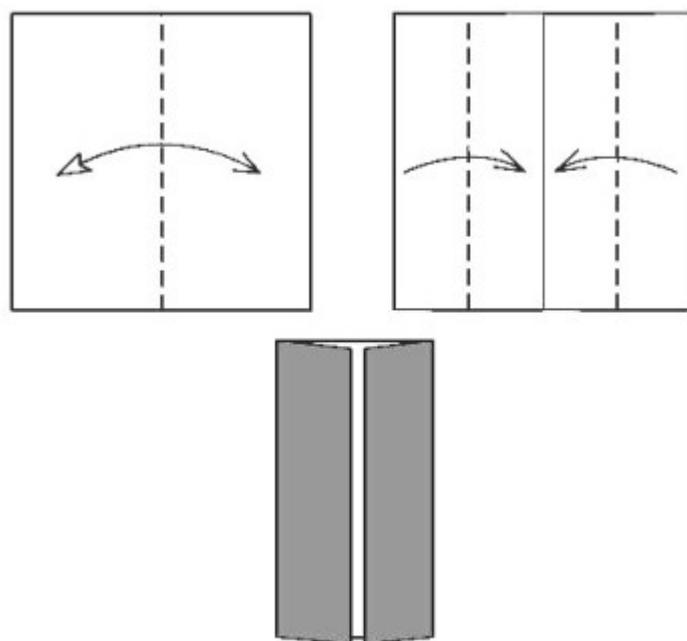

5

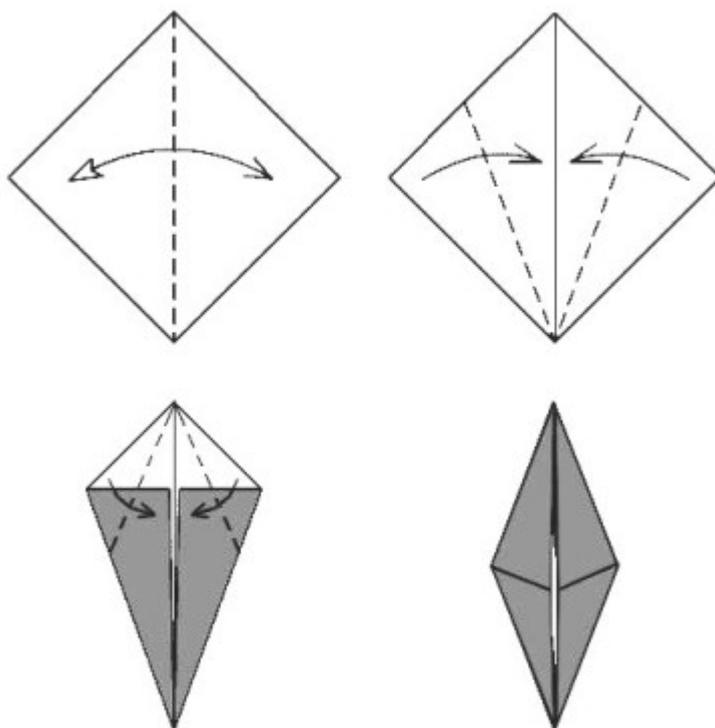

6

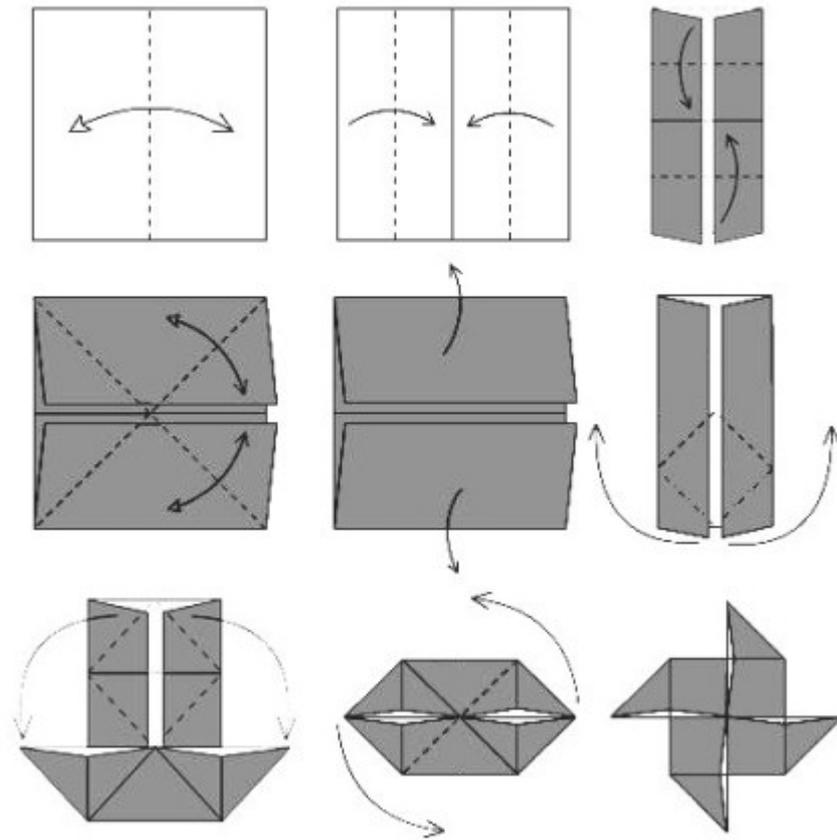

La base du coffre

La base du diamant

La base du moulin à vent
